

Dump JavaScript variables

Posted At : August 23, 2005 8:41 PM | Posted By : Steve

cfdump is such a handy utility in ColdFusion. I have always wanted a similar utility for JavaScript. Now there is one!

I thought of trying to write such a utility myself, but the task seemed, well, daunting. Fortunately, [Depressed Press of Boston](#) has tackled the project that I never would have done myself. I haven't used it yet, but I very much look forward to it.

For those of you that aren't familiar with [cfdump](#), it outputs the contents of a simple or complex ColdFusion variable, similarly, [dpDump\(\)](#) output the contents of a simple or complex JavaScript variable. I imagine that this will come in very handy during debugging.

[Read about dpDump\(\)](#).

Thanks [Depressed Press of Boston](#)!
