cfdump for JavaScript

I try to avoid blog posts that just repeat what has been said elsewhere, but this is really nice.

I blogged earlier (mid-2005) about a **JavaScript version of cfdump**. I actually used this recently to help me implement **JSMX** (which I love!).

I saw an entry today the strikefish blog about another **JavaScript CFDUMP** which looks great. The advantage of this one is that the output more closely matches the output and behavior of cfdump. I like this in part because the format is familiar and in part because it is a really useful format.

If you just want to see the tool, take a look at **JavaScript Dump**.
