Over time I have found a handful of nifty little JavaScript utilities. I was about to compile a handy reference of them for myself when I realized that others might be interested in them as well.

These are scripts that I have used and liked as well as some scripts that I haven't used but look nifty.

Here they are in no order:

General

- [Bill Rawlinson's Unobtrusive Sortable Tables](#)
- [Expandable list using DOM](#)
- [Tabtastic](#)
- [qForms](#)
- [jComponents](#)
- [DynArch DHTML/JavaScript Calendar](#)
- [Tigra Color Picker](#)
- [Tigra Calendar](#)
- [Tigra Tree Menu](#)
- [ActiveWidgets](#)
- [XML for JavaScript](#)
- [Matt Kruse's JavaScript Toolbox](#)

Menus

- [Son of Suckerfish](#)
- [Project Seven](#)
- [Milonic](#)
- [DynArch Menu](#)
- [UDM 4](#)

WYSIWYG Editors

- [HTMLArea](#)
- [FCKeditor](#)
- [TinyMCE](#)
- [XStandard](#)
- [widgeEditor](#)

Let me know of any other scripts that I should add to the list.
