After years of working on my **sebtags custom tag set**, I think it is now stable enough to put it in release candidate stage. If all goes well, this will exactly match the final release which will come out soon.

I haven't added any new features to this release, but I did fail to mention a feature that was added to the last beta.

Joseph Lamore added the ability to pass an array of structures into cf_sebField for the options (used for select boxes, checkboxes, radio buttons).

I hope to get back to blog entries on using the library next week.

The **sebtags custom tag set** is open source and free for any use.
