This week was a little easier to pick than others. Though the week had plenty of great entries (and a few on new quirks in cfquery that I was really sad to leave out), the following five are really entries that every CF developer should read.

Just to note, the "Steve" in the first entry isn't me, but it is a great topic.

- **Ask a Jedi: Why isn't my cferror working?** (**Ray Camden**, February 18)
- **Top-10 Application-Design Mistakes** (**Jakob Nielsen**, February 19)
- **Guidelines: Code Readability - Pt1** (**Steve "Cutter" Blades**, February 20)
- **Does CFArgument Typing Protect Against SQL Injection** (**Mark Kruger**, February 21)
- **Underestimating the importance of troubleshooting** (**cfSearching**, February 21)
