

ColdFusion Blogs Picks of the Week

Posted At : January 7, 2008 10:30 AM | Posted By : Steve

Related Categories: CF_BlogPicks, ColdFusion

This is my first post in what I hope will be a ongoing series. In my discussion with other developers, I have often found that they miss blog posts that I think every ColdFusion programmer should see. The reason seems pretty clear: With so much blog traffic, it takes too much time to read through all of the traffic.

Just to be clear, I am not trying to find the "best" entries, just the ones that I think are essential reading. My guidelines are still pretty rough, but basically the idea is that I am picking blog entries that I think I will want to mention to other developers. Blog entries that discuss topics of general interest to ColdFusion programmers are preferred to those that discuss a specific tool or framework. Naturally, I won't pick any of my own entries.

All of that out of the way, here are my picks for January 1 to January 6:

- [Coldfusion Mod Rewrite](#) (Gary Gilbert, January 2)
- [Ask a Jedi: Where in the heck is this PATH variable coming from?](#) (Ray Camden, January 2)
- [Manipulate the DPI with cfimage?](#) (CF-Talk, January 3)
- [cfdump output attrribute, The What, Why and How](#) (Sam Farmer, January 4)
- [The Trouble with CF8's .NET Integration](#) (Jim Pickering, January 6)
