It has been more than a year since I released [Mailer 1.5](#) and new enhancements have been slow in coming. That is because it has, for the most part, done exactly what I needed.

Still, from time to time, I get ideas or suggestions for small enhancements to the component.

New from 1.5:

- ReplyTo argument (for Reply-To header)
 - Available in send method
 - Also available in init method to set a default
- Sender argument (for Sender header) - thanks to [Sami Hoda](#) for this suggestion!

That's it!

As you can tell, [Mailer](#) is pretty stable. It does what it does and doesn't need to do much more.

[Mailer.cfc](#) is open source and free for any use.
