com.sebtools Build 1

I have done a few entries on components that use **DataMgr** (listed under "DataMgr Utility Set"). Until now, I have had each as a separate download. My thinking was that it would reduce the amount of data you would need to download in order to use the tools. In fact, this added a step to use them as you had to download DataMgr as well if you didn't already have it.

In an attempt to learn from this mistake, I have merged all of these projects as the com.sebtools package.

I have started **documentation** on these components as well. So far, the documentation doesn't have any new content, but I plan to expand the information available on these components in the near future.

In the meantime, feel free to **download com.sebtools**. It is open source and free for any use.
