In the last several weeks, I have gotten a few bug reports on [DataMgr 2.2](#). Most of them are fixed in this release.

(What is DataMgr?)

The following bugs were fixed in this release:

- Some problems working on Railo
- An error for "DB2" undefined
- Problems with the "IN" operators in filters
- Some var-scoping issues (apparently I thought I was too smart for [VarScoper](#))

That is it for this release. Much more is planned for the future, but that is another blog entry.

[DataMgr](#) is open source and free for any use. You can see it in action on the [DataMgr demonstration](#) or download it from [RIAForge](#).
