Updated SpamFilter Definitions

This is just a quick note that I have updated the spam definitions for SpamFilter.cfc. So, if you are using SpamFilter.cfc and have the second argument of init ("getNewDefs") set to true, simply re-initialize it and you will have the updated definitions.

Although I am happy that new definitions can get added without updating the code, I think the need to re-initialize the component in order to get updated spam definitions is too much effort given the pace of change in spam. So that is something I will have to work on in for the next version.

In the meantime, feel free to check out **SpamFilter.cfc** if you are interested in it. It is part of the **com.sebtools package** all of which is open source and free for any use.
